Jan 2018 – Mar 2018 // Morococha, PE

- Charged of the maintenance and correct operation of computer equipment.
- Helped and provided technical solutions to different areas of the organization.
- Installed and configure more than 50 desktop computer for the new interns.

Projects

TitangDiet-App

- CRUD Desktop App, where users can look for food and see the nutritional value as calories, carbohydrates, etc. Also can add the meals they want and their nutritional values will be displayed on a table. Saved between 2 to 3 hours a day in the creation of the diets of each student(Python, Tkinter, Sqlite3).

Ecommerce App

- I developed an ecommerce web page as practice, using django in the backend and react in the frontend, reactbootstrap for the styles, registration functionality, login, search, roles as user and administrator, CRUD for products and users. (Django, React, ReactBootstrap, Redux, JWT)

MERN Project

- Using the MERN stack, I developed this application where the user can keep track of their projects and the tasks assigned to them the styles were done with TailwindCss. CRUD functionality for projects and tasks. Authentication functionality and more. (ExpressJs, React, Context API, JWT, Socket IO, TailwinCss)

Blog App

- Allow users to sign up and create an account, user login required to create a comment. Login/logout functionality, CRUD functionality, markdown and syntax highlighting to posts(Django, Html, Css, JavaScript, Bootstrap).
